

Ask in plain language. Get the figure from your ERP.

Askera AI connects to your company's ERP in read-only mode and answers with tables, charts and forecasts calculated from your own data. You don't need SQL, and the answer arrives in seconds.

Screenshots from the app: partners are coded and the figures are randomly generated.

~€10,000

saved in the first month by one of our clients, by their own team's estimate

5

forecasting models, recalculated every night

WHAT IT DOES EVERY DAY

CHAT

Ask the way you talk

Type or dictate your question. Askera finds the right report, runs it on the ERP and shows you the full table, with a summary on top.

BUSINESS INTELLIGENCE

Dashboards by department

Management, finance, sales, logistics and stock. Filter in words, for example "last month only, without cancelled orders", and export to CSV or Word.

FORECASTS

See what is coming

Collections and payments over 90 days, demand, late payment risk and margin anomalies, recalculated every night.

SCHEDULED REPORTS

Monday's report sends itself

Daily, weekly or monthly by email, with all the data attached as CSV or Word. The figures match the app.

ACCESS

Everyone sees their own

Rights are granted by department and by report. Two-step sign-in, and the log shows who ran what and when.

TRUST

Read-only, and a person approves

Askera reads the ERP and cannot change it. Reports proposed by the AI reach people only after someone in the company approves them.

See Askera AI on a real case

In 30 minutes we show you the app running at our clients and check together what your ERP can deliver. It works with PostgreSQL, MySQL and SQL Server.
