

From ERP to decision, in five steps.

Askera AI answers management's questions with figures calculated from your company's ERP. The images are from the app, with partners coded and randomly generated figures.

1

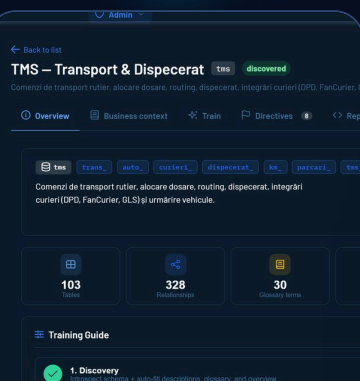

READ-ONLY

We connect the ERP

With an account that can only read. We install nothing in the ERP and change no data.

2

Askera learns the company

It reads how the data is structured and proposes reports. Someone in the company approves them.

3

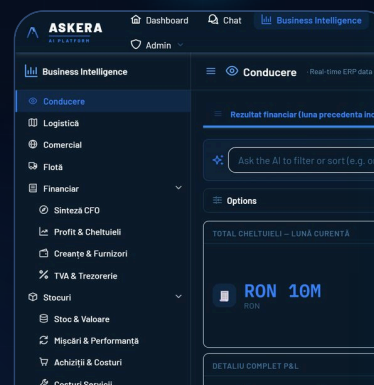

How much will clients pay us over the next 90 days?

or dictate it

You ask in your words

Type the question as you would to a colleague, from a computer or a phone.

4

You get the figure

The full table and the department dashboard, calculated by the database in seconds.

5

You see what is coming

Forecasts for collections, payments and demand, recalculated every night.

~€10,000

saved in the first month by one of our clients, by their own estimate

30 min

free online demo

€500 – €1,000

per month, per organisation
